## PROJECTS

### **Hospital Management System App**

Laravel

I worked on a graduation project for a hospital management system using Laravel technology and reactjs, one of the features is booking a patient appointment, archiving patient data, and many more features that I will add in the future

### **Books Store App**

Django

I built a website using Django for a bookstore and one of the features is to show similar books to current books and books that people have bought using artificial intelligence algorithms

### **E-commerce App**

Laravel

An online store site in the client interface where products and items are displayed with the ability to search and in the administrator interface there is a control panel to manage products smoothly developed

### **Blogs App**

Laravel

Multilingual news site An interactive interface to display the latest news and all categories of news and review the details of each news and a control panel for both the administrator and the writer to add new news
